

**FLAT SHEET - COMPOSITION:**

**Flat Sheet in Fiber Cement**

Flat sheets represent the new generation of sheet, composed by cement and inert materials, reinforced with cellulose and autoclaved.

They are fire-resistant, non putrescible and difficult to be attacked by rodents, scums and fungi.

Sheets are produced in different thicknesses ranging from 4 mm to 32 mm, they could be coloured in mass.

About 13% of the flat sheets are painted.

The sheets can be used for external applications (facades).
